

SWITCHGEAR, SWITCHBOARDS, AND CIRCUIT BREAKERS PREVENTATIVE MAINTENANCE

Switchgear, Switchboards, and Breakers exist in every building as an integral part of the electrical system distribution. When switchgear and/or breakers fail, a business will experience power outages, fires or a worse scenario of a catastrophic event such as downtime, equipment destruction, and bodily injury resulting in loss of life. A scheduled preventive maintenance contingency plan from Power Systems & Controls power quality specialists will help prevent a facility breakdown.

Power Systems & Controls switchgear, switchboards, and breakers **Preventative Maintenance** consists of testing and inspecting the mechanical and electrical:

Mechanical Inspection:

- Insulator Checks
- Moving Parts
- Wiring
- Moisture

Electrical Test:

- Circuit Breakers and Switches
- Infrared Scan
- Arc Flash Analysis
- Wiring
- Primary and Secondary Injection
- Power Quality

Power Systems & Controls can team with your business to schedule Preventative Maintenance to ensure “**The Power is On!**”

PROTECT YOUR BUSINESS NOW!
